Description			
Hi,			
I've a trouble with Auth in Prewikka. It's impossible to enable [auth loginpassword] in /etc/prewikka/prewikka.conf: "Cannot use auth mode 'loginpassword', please contact your local administrator". (cf. print screen)			
Do you have any suggestions ?			
Thanks.			
Robin

- Status changed from New to Assigned
- Assignee set to Antoine LUONG

Hello,

The current OSS version does not include an authentication module, though we may add it in the future.
For the time being, configuring a basic authentication with Apache could do the job.

Regards

Hi,

Thanks for your reply.

I'll try with Nginx.

Robin

I'd a password authentication with htaccess in Nginx.

Now, I've an another issue. The account on prelude is blocked at "anonymous". So I've access to anything.

Do I change anything in my database ?

Thanks.

Robin

Yes, that is normal. What are you trying to achieve?

Regards
