Target version:	Prelude OSS 5.1.0		
Resolution:			
Description			
<p>Hi,</p> <p>I have a problem to register my IDS (Suricata) on Prelude OSS. My IDS is on the same network but in a different CentOS VM. The prelude address is 192.168.0.2 and the IDS address is 192.168.0.3</p> <p>I already installed from source : prelude-manager, prelude lml (not used), prelude-admin and libpreludedb. I configured the /usr/local/etc/prelude/default/client.conf to change the server-addr=127.0.0.1 to server-addr=192.168.0.2</p> <p>Same for prelude-manager.conf with listen = 192.168.0.2:5553</p> <p>I verify the connection between my IDS and my Prelude with a ping.</p> <p>Then I enter the command line on the prelude machine :</p> <pre>prelude-admin registration-server prelude-manager</pre> <p>and on the IDS :</p> <pre>prelude-admin register suricata "idmef:w admin:r" 192.168.0.2 --uid 1000 --gid 1500</pre> <p>I copy the one shot password but get this error message on my IDS :</p> <pre>Connecting to registration server (192.168.0.2 :5553) Could not connect to 192.168.0.2 port 5553 : No route to host</pre> <p>So I scan my port and the number 5553 remains closed throughout all the process.</p> <p>I may have missed a command line or configuration, so i reread the whole doc but I didn't found anything about it.</p> <p>Do you have any suggestions?</p> <p>Thanks.</p>

Hello,

Did you check your firewall rules?

Regards

#2 - 04/12/2019 12:36 PM - Marc-Antoine delannoy

Thanks for your answer.

It's exactly the problem. I just have to use firewall-cmd command to solve it.

Sorry I thought prelude was in charge of opening the port. which is obviously not possible for security reasons.

Thank you.

Regards,

Marc-Antoine Delannoy
