Target version:	Prelude OSS 5.1.0		
Resolution:			

Description

Hello,

I am trying to run the libprelude on a raspberry pi to use suricata with the prelude alert format.

I download the libprelude-5.0.0.tar.gz and decompress the archive.

then:

```
./configure
make
make install
LD_LIBRARY_PATH=/usr/local/lib
export LD_LIBRARY_PATH
```

and when i try to use prelude-admin without argument it works and displays the help message.

But if for example i try prelude-admin list it returns a segmentation fault.

Same for any argument.

And if i run make check

I have 4 errors.

the end of the output is:

```
make check-TESTS check-local
make[3]: Entering directory '/home/suricata/libprelude-5.0.0/tests'
make[4]: Entering directory '/home/suricata/libprelude-5.0.0/tests'

```

Do you have any idea how to solve this?

Regards

Hello

Can you give us a full backtrace from gdb when segmentation fault appears ?

It should works as under debian : <https://buildd.debian.org/status/package.php?p=libprelude>
Is it possible for you to use these deb files ?

Regards

#2 - 05/09/2019 07:14 AM - Marc-Antoine delannoy

Yes that's what I did and it works with apt-get install libprelude-dev
Thank you for your help and excuse me for the inconvenience.
