Description

Hello,
I'm trying to set up the latest version of prelude OSS on raspbian. With some effort I installed almost everything.
However, I have a problem with prewikka whose installation doesn't work. I have installed all the dependencies.
But I'm getting some errors when I run this command -> python setup.py install

```
root@raspberrypi:/home/prelude/prewikka-5.0.2# python setup.py install
running install
running build
running compile_catalog
error: prewikka/locale/de/LC_MESSAGES/prewikka.po:1560: placeholders are incompatible

```

there is a problem with languages. The second problem I guess it is: prewikka/htdocs/css/themes/dark.css that is not found.
Package installation does not seem possible in version 5 for a debian-based distribution (4 is the last version i found).

Do you have any idea how to solve this?
Regards

Hello,

You probably lack the python-lesscpy dependency.
The errors about incompatible placeholders come from missing translations, but they can be safely ignored in this case.

Thanks,
the installation works but i have segmentation fault when i use /usr/local/bin/prewikka-httpd.
PYTHONPATH is set with /usr/lib/python2.7/site-packages:/usr/local/bin/prewikka-httpd.
I have installed libprelude with python binding and libpreludedb with mysql binding.
All tables seem to be correctly created and user/password are valid in /etc/prewikka/prewikka.conf

how can i give you more information to help?
