

PRELUDE SIEM - Bug #1211

prelude-admin does not work on Debian after fresh install

Description <p>I am trying to use prelude-admin on a Ubuntu-like system. In particular, I want to register to a server. Unfortunately, this is not possible.</p> <p>When installing prelude 5.1.0 via sources, it does build successfully, but I get a single failed test during 'make check':</p> <pre>... PASS: test-localename ../../test-driver: line 95: 6213 Aborted "\$@" > \$log_file 2>&1 FAIL: test-rwlock1 PASS: test-lock ...</pre> <p>The command 'prelude-admin' does show the help menu, but adding any argument or command, e.g. 'prelude-admin register' results in a SegFault (similar to another issue: https://www.prelude-siem.org/issues/1092). The log file states "Unexpected outcome 3".</p> <p>Then I tried installing the binaries (v4.1.0) after removing everything with 'make uninstall' and rebooting the system. Following the docs, I installed it via</p> <pre>apt install prelude-utils</pre> <p>Now, I can execute the registration command like this without an SegFault:</p> <pre>prelude-admin register my_sensor_name "idmef:w" <x.x.x.x> --uid 0 --gid 0</pre> <p>This throws an error stating that</p> <pre>error creating directory /var/spool/prelude/my_sensor_name: No such file or directory.</pre> <p>I am root on this system, so it shouldn't be a kind of access issue. Also, the server works just fine.</p> <p>Can somebody tell me, where these errors come from and how I can fix them?</p> <p>Thanks in advance, Sebastian</p>

Hello

Can you create the folder `/var/spool/prelude` and retry "prelude-admin register" ?

Regards
