#### Description

Hello,

Renato Botelho noticed that when installing Prewikka, it will create three empty files in the Python sitelib directory (\$PYTHON\_SITELIBDIR).

```
One mor point, it's installing 3 files, +init+.py[co] on
usr/local/lib/python2.4/site-packages/, until i know it's not correct to
install files directly on site-packages dir. -- Renato Botelho
```

Regards,

Robin

- Resolution set to invalid

This appear to be the expected behavior:

*The +init.py files are required to make Python treat the directories as containing packages; this is done to prevent directories with a common name, such as "string", from unintentionally hiding valid modules that occur later on the module search path. In the simplest case, +init.py can just be an empty file, but it can also execute initialization code for the package or set the +all+ variable, described later.*

##### #3 - 05/04/2006 09:40 AM - Yoann VANDOORSELAERE

I've misunderstood the ticket description at first: fixed in r8180.

##### #4 - 04/29/2009 12:24 PM - Yoann VANDOORSELAERE

- Project changed from PRELUDE SIEM to Prewikka

- Category deleted (5)

- Target version deleted (0.9.5)
