Description

Hey there,

I would suggest the following feature for prewikka: In the detailed alert view

`/?view=alert_summary&origin=alert_listing&messageid=$alert.messageid`

there should be the possibility to view this event in pure IDMEF XML, too. This would make it easier to get an IDMEF overview and indepth view, as well as it makes it easier to create rules/filters on IDMEF criteria, i.e. if using the smtp plugin or just some other custom filters
