Resolution:	fixed		
Description			
Hi,			
I'm trying to build a new lua rule following the wiki			
I'm using debian lenny repo prelude-correlator 0.9.0~beta3-1			
When launching prelude-correlator I got:			
05 Mar 10:00:43 (process:6907) INFO: LUA plugin loaded 6 rulesets.			
05 Mar 10:00:43 (process:6907) INFO: Connecting to 127.0.0.1:4690 prelude Manager server.			
05 Mar 10:00:43 (process:6907) INFO: TLS authentication succeed with Prelude Manager.			
05 Mar 10:00:43 (process:6907) ERROR: LUA error on 'test': attempt to call a nil value. (lua.c:148 lua_run)			
05 Mar 10:00:43 (process:6907) ERROR: LUA error on 'test': attempt to call a nil value. (lua.c:148 lua_run)			
05 Mar 10:00:43 (process:6907) ERROR: LUA error on 'test': attempt to call a nil value. (lua.c:148 lua_run)			
and my rule test.lua is so basic...			
function my_rule(INPUT) local classification = INPUT:get("alert.classification.text") print("*** " .. classification) end			
Hope it's just a syntax detail !

Whow...

i got it :)
the <function name> MUST BE the same than the <rulename>.lua
sorry

hope this at least helps the next one !

- Status changed from New to Closed

- *Resolution set to fixed*

Prelude-Correlator need to have a base function to call for each ruleset, which is why we currently use the filename. This might be changed in the future with a better scheme.

Regards,
