Description

Hello everybody,

I'm trying to install sancp on my computer for looking my network.

First, the link of the tar.gz is dead on this page (https://dev.prelude-ids.com/wiki/prelude/InstallingAgentThirdpartySancp) .

Secondly, I found a different version on this page : http://metre.net/files/
but the lastest version doesn't compile with prelude option.

Anybody have a stable version of sancp working with prelude ? Could you indicate how to configure it to log Alert in prelude-manager.

Thanks
