

PRELUDE SIEM - Bug #368

Generating 1024 bits Diffie-Hellman key for TLS... and... That's it !

01/05/2010 03:25 PM - Gilles Dupont

Status:	Closed	Start date:	01/05/2010

Resolution:	invalid		

Description

Hay, I've a problem when I make a "prelude-manager" command.

I did a "prelude-admin add "prelude-manager" --uid 0 --gid 0" first, and the prelude-manager profil is in /usr/local/etc/prelude/profil/. I have my analiezrid file.

But when I run the "prelude-manager" commande, it does anything :

```
[root@Template ~]# prelude-manager
```

```
05 Jan 10:44:58 (process:29357) INFO: Subscribing Normalize to active decoding plugins.  
05 Jan 10:44:58 (process:29357) INFO: server started (listening on 127.0.0.1 port 4690).  
05 Jan 10:44:58 (process:29357) INFO: Subscribing db[default] to active reporting plugins.  
05 Jan 10:44:59 (process:29357) INFO: Generating 1024 bits Diffie-Hellman key for TLS...
```

I should have something like that :

```
02 Nov 16:55:41 (process:12957) INFO: Subscribing Normalize to active decoding plugins.  
02 Nov 16:55:41 (process:12957) INFO: server started (listening on 127.0.0.1 port 4690).  
02 Nov 16:55:41 (process:12957) INFO: server started (listening on 192.168.2.10 port 4690).  
02 Nov 16:55:41 (process:12957) INFO: Generating 1024 bits Diffie-Hellman key for TLS...  
02 Nov 17:25:49 (process:15259) INFO: Subscribing db[default] to active reporting plugins.
```

But four hours left, I still have nothing.

Do you have any idea ?

History

#1 - 01/05/2010 03:38 PM - Gilles Dupont

I'm running a VM Centos 5.4 btw.

#2 - 02/06/2010 03:35 PM - Pierre Chifflier

This could be caused by lack of entropy. Can you check with the following command:

```
# cat /proc/sys/kernel/random/entropy_avail  
3968
```

If the result is ~ 0, then you don't have enough entropy.

#3 - 05/05/2010 11:21 AM - Yoann VANDORSELAERE

Is the above bugs still an issue, or might we close this ticket ?
