

Prewikka - Bug #371

opening events in new window/tab

02/12/2010 07:20 PM - Tom Bicer

Status:	Closed	Start date:	02/12/2010
Priority:	Normal	Due date:	
Assignee:		% Done:	100%
Category:		Estimated time:	0.00 hour
Target version:	Prelude OSS 1.0.0		
Resolution:			
Description			
Opening events in new window or tab is inconsistent. Unable to open events occurring only once in new window, this applies to medium and high warnings. Events occurring more than once open in new window but with out any information, this applies to medium and high warnings. Events with low warning open in new window and with information related to the warning Prelude console version 1.0.0rc3

Fix inline filtering problem for event name with start/ending space

When performing an exact comparison of the filter input, do not strip space from the start and the end of the input, since it happen that some sensor put a space at the end of the string. Closes #371.

Correction to low warning events: single occurring event do not open in new window.

#2 - 02/16/2010 10:21 AM - Yoann VANDOORSELAERE

Hi Tom,

When there is a serie of events aggregated (example: 10 x TCP packet dropped):

- clicking on the event name will trigger a filter on this event name.
- clicking on the number before the events name will list all events aggregated.

When there is only one events (example: TCP packet dropped):

- clicking on the event will trigger a CSS popup from which there are two links:
- one to see the alert details
- the second, to add a filter on the event name

The problem is most probably that you are trying to open a non existing link (the CSS popup, instead of opening the popup, then activating the link) in a new Windows.

Could you confirm whether this is what is happening?

- Aggregated event, high severity (x2)
 - Clicking on the event name: No results are shown.
 - Clicking on the number before the event name: No results are shown. Removing filter on Classification column shows events

Above with severity low somewhat works. Clicking on event name shows just that event name with number beside it, from here event name doesn't link anymore, just the number.

- One event
 - Clicking on the event name, see alert details: Results are shown.
 - Clicking on the event name, add filter on the event name: No results are shown.

Filtering on classification.text seems broken for you. Could you please provides a screenshot of the empty view, after you click on the event name, with the inline filter box for classification open?

Regards,

Perhaps this may help. Changing filter condition on the event name to regular expression "~" works. However "=" on low warnings works just fine.

#7 - 02/18/2010 03:32 PM - Yoann VANDORSELAERE

Could you please let us know what is the event name where this happened?
I suspect there might be some whitespace / escaping problem

Happens in all of them. Examples:
ET TROJAN Oficla Checkin (1)
SQL Microsoft SQL Server 2000 Server hello buffer overflow attempt
ET WEB_CLIENT Possible HTTP 404 XSS Attempt (External Source)

#9 - 02/18/2010 05:59 PM - Yoann VANDORSELAERE

I'm unable to reproduce this issue, could you please provides your libprelude and libpreludedb version?
Additionally, would it be possible to access the Prewikka instance where this problem is occurring?
