Description			
Dear ..			
I need help with installation of prelude.			
My machine is a Fedora 23 64 bit with 1 TB hard-disk			
First thing, I installed the prelude-release from Yum Extender			
Then I issue the command in order to check as you can see			
1. rpm -i prelude-release-1.0.0-1.el6.noarch.rpm			
package prelude-release-1.0.0-1.el6.noarch is already installed			
Then I tried to install libprelude:			
2. dnf install libprelude			
Failed to synchronize cache for repo 'prelude-siem' from 'https://www.prelude-siem.org/pkg/redhat/23': Cannot download repomd.xml: Cannot download repodata/repomd.xml: All mirrors were tried, disabling.			
Last metadata expiration check performed 0:59:52 ago on Fri Nov 20 22:12:39 2015.			
No package libprelude available.			
Error: Unable to find a match.			
Could you please help me with this ??			
Thanks in advance

Hello,

We currently provide only RHEL6 packages in the prelude repository.
For Fedora you need to compile the Prelude modules from the sources.

Regards
